

North Carolina Counties with 8-Hour Ozone Violations 1999-2001

- 21 of 34 counties and 31 of 45 sites with a 3-year average of the annual 4th high value for each year equaling 0.085 ppm level or higher (violation of the 8-hour standard).
- One county with only 1 year of data (2001) is above the attainment threshold.
- 12 monitored counties are attaining the 0.085 ppm standard.

NOTE:

- Additional counties may be involved in emission reduction strategies.
- Nonattainment designations may not follow county boundaries.
- Final data validation is not yet complete.
